

# 10 BEST PROTOTYPING TOOLS FOR APP DEVELOPERS

## FIRST THINGS FIRST... WHY?

App developers have two options, really. You either have your hands on the best - or worst - design. The thing is you won't know the answer until you do some quality testing. This, my friends, is where **prototyping** comes into the picture.

Here is a list of the **10 best prototyping tools** for mobile developers that makes app development a whole lot easier!

## PROTO.IO

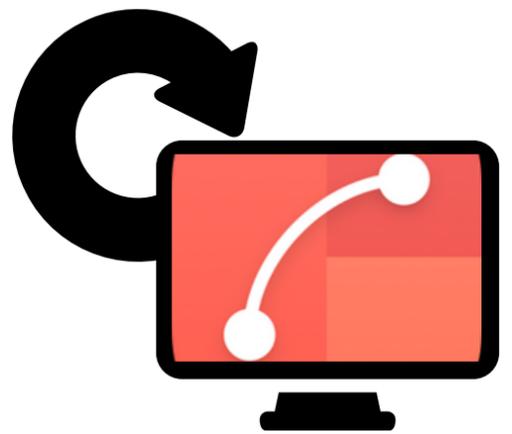

**Proto.io** enables you to create **fully-interactive**, high-fidelity prototypes that feel like the real deal. Design, prototype, preview, collaborate and share - the possibilities are endless, really.

What's the best thing about this prototyping tool? Absolutely **no coding required**.

## FLINTO

With **Flinto** designers can make interactive prototypes for both **Android** and **iOS** apps.

You can use this prototype tool to create **custom animations, gestures**, and **Sketch import**.

## JUSTINMIND

**Justinmind** is a great prototyping tool that can make a prototype for **any web or mobile app** - no code knowledge required.

Their **ready-made template** means anyone can build an app prototype like a pro.

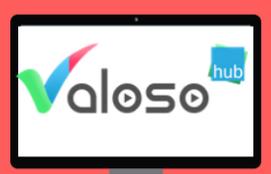

## UXPIN

The great thing about UXPin is that you can prototype with **custom team UI libraries, built-in libraries** (Bootstrap, iOS, Android, etc) and **Photoshop/Sketch integrations**.

**Create, experiment, build** and **design** your app to perfection. Also, no code is required. Exciting, isn't it?

**Ready to build your prototype?**  
**Valoso Hub can help**

## MARVEL

With **Marvel** you can create screens directly or add images from Photoshop or Sketch. You can **link all your designs** together, then **add transitions and gestures** to give it a real feel.

Once you're done - share your project and **get real-time comments** and feedback from clients or colleagues.

## INVISION

**Invision** is another **powerful prototyping tool** that is worth looking into. All you need to do is upload your design and turn a static screen into a **fully clickable prototype** by adding transitions and gestures.

If your looking to a create a great prototype **fast and easy** - this is worth checking out.

## FLUID

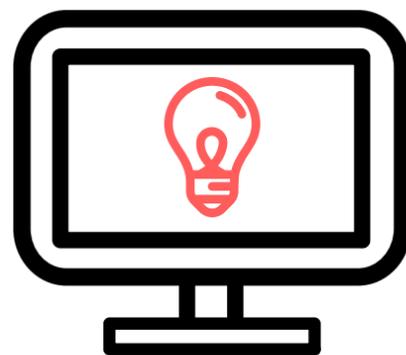

**Fluid** has **16 built-in libraries** to choose from for Android, iOS, web and more.

Add interactions and animations to add a realistic touch. You also **collaborate** with other designers to improve your prototype. **Receive feedback, fix design issues** and **conduct tests**.

## MOCKPLUS

Prototype faster, smarter and easier with the help of **Mockplus**.

This prototyping tool helps turn complexity into simplicity. It can be used to prototype both **mobile and web apps**. It is easy to use which makes it the **perfect choice** for those who don't have much experience in prototyping.

## AXURE

If you haven't already heard of - or tried - **Axure**, now's the time. This is a **prototyping tool** that makes **app development** a piece of cake.

Have fun **creating rich prototypes** with conditional logic, dynamic content, animations, math functions, and data-driven interactions.

## MOCKINGBOT

**MockingBot** is your **headache-free prototyping tool** that helps you create your app prototype in just 10 minutes. Amazing, right?

Oh, did I mention they have a cool landing page that makes you want to get prototyping right away? Well, they do!
